

**Notice of Public Information Centre
Municipal Class Environmental Assessment**

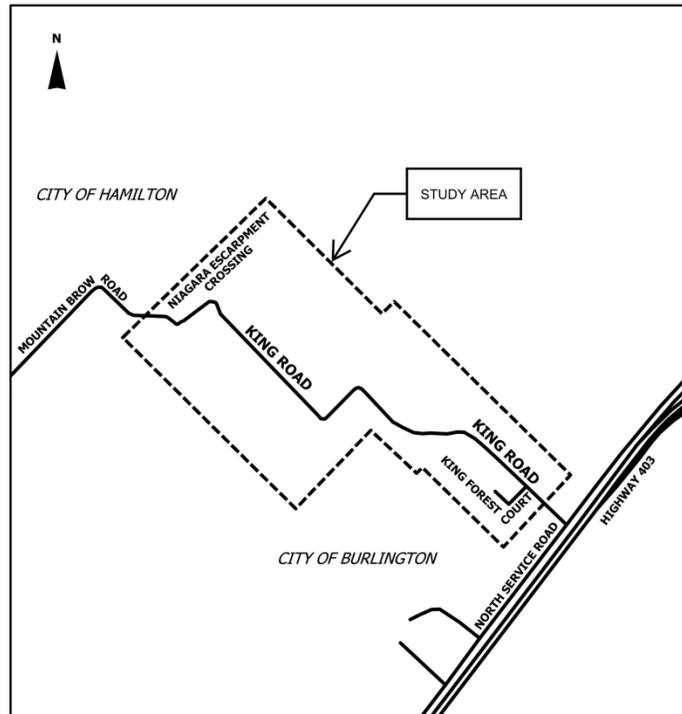

**Reconstruction of King Road
North Service Road to the Escarpment Crossing**

The Study

In August 2013, The City of Burlington started a Municipal Class Environmental Assessment (Class EA) Study of King Road to address road improvements on King Road from 50 metres north of the North Service Road to the escarpment crossing (Refer to the Study Area). The study will identify and evaluate the improvements required to rehabilitate King Road which may include a combination of the following:

- Resurfacing/reconstruction and minor widening of the roadway;
- Improvements to the road's horizontal and vertical alignment;
- Adding paved shoulders to improve the road structure and to accommodate cyclists;
- Improvements to roadside protection systems.

In addition to the above, the study will also identify and address a variety of other engineering aspects including roadway geometrics, accesses to adjoining properties, drainage, culverts, utilities and services. Minimizing the environmental impact on the sensitive natural areas adjacent to the road will be considered when evaluating the road improvement options.

The Process

The study is being conducted in compliance with Schedule A+ of the Municipal Class Environmental Assessment (October 2000, as amended in 2007 and 2011), which is approved under the Ontario Environmental Assessment Act. Through this process, the project team will identify the problems and opportunities associated with roadway improvements, assess alternative ways to address the identified problems and opportunities, and select a preferred alternative that has minimal impact on the surrounding built, socio-economic and natural environments. Consultation with members of the public, stakeholders and regulatory agencies is an important part of the planning process.

Public Information Centre

A Public Information Centre (PIC) will be held on :

- Date:** Thursday, Feb.20, 2014
Time: 6:30 to 8:30 p.m.
Place: King's Court Banquet Centre
1159 King Rd., Burlington, Ont.L7R 3X5

The purpose of the PIC is to present the study background, existing conditions of the study area, problem/opportunity statement, and assessment of the design alternatives based on technical and environmental considerations. People attending the meeting can review the preferred alternative, provide comments and discuss any concerns or issues they may have with representatives from the project team. Comments received from the public will be considered in the preparation of the project file. With the exception of personal information, all comments will become part of the public record.

Upon completion of the study, a comprehensive project file report will be prepared and will be available for a 30-day review period. The document will detail the planning process and the preferred alternative including how the public and agency input was received. A notice of completion will be issued at this stage.

Comments
