

**Municipal Class Environmental Assessment  
Notice of Public Information Centre**

**Flood Assessment and Crossing Upgrades between New Street and Spruce Avenue**

The City of Burlington is undertaking a Class Environmental Assessment (Class EA) on Tuck Creek to assess flooding and identify crossing and channel upgrades between New Street and Spruce Avenue (see figure below).

The study is being undertaken as a result of the extreme weather event of Aug. 4, 2014 during which crossings at New Street, Regal Road, and Spruce Avenue were overtopped by flood waters. The City previously undertook a Class EA for erosion control on Tuck Creek within the same study area. The recommended works from the EA have undergone detailed design and will be implemented in coordination with the results of the city's Flood Vulnerability, Prioritization and Mitigation Study to ensure that both erosion and flood concerns in the study area are addressed appropriately.

The flood study is being conducted as a 'Schedule B' project in compliance with the Municipal Engineers Association document *Municipal Class Environmental Assessment* and is addressing Phases 1 and 2 of the Class EA Process.

A Public Information Centre (PIC) will be held to present the potential solutions to address flooding risks and to gather feedback from the community. Comments and information regarding the study will be collected to assist the city in meeting the requirements of the Environmental Assessment Act.

The Public Information Centre is scheduled as follows:

**Date:** Monday, Nov. 30, 2015  
**Time:** 6:30 to 8 p.m.  
**Location:** City Hall, Room 247  
426 Brant St.

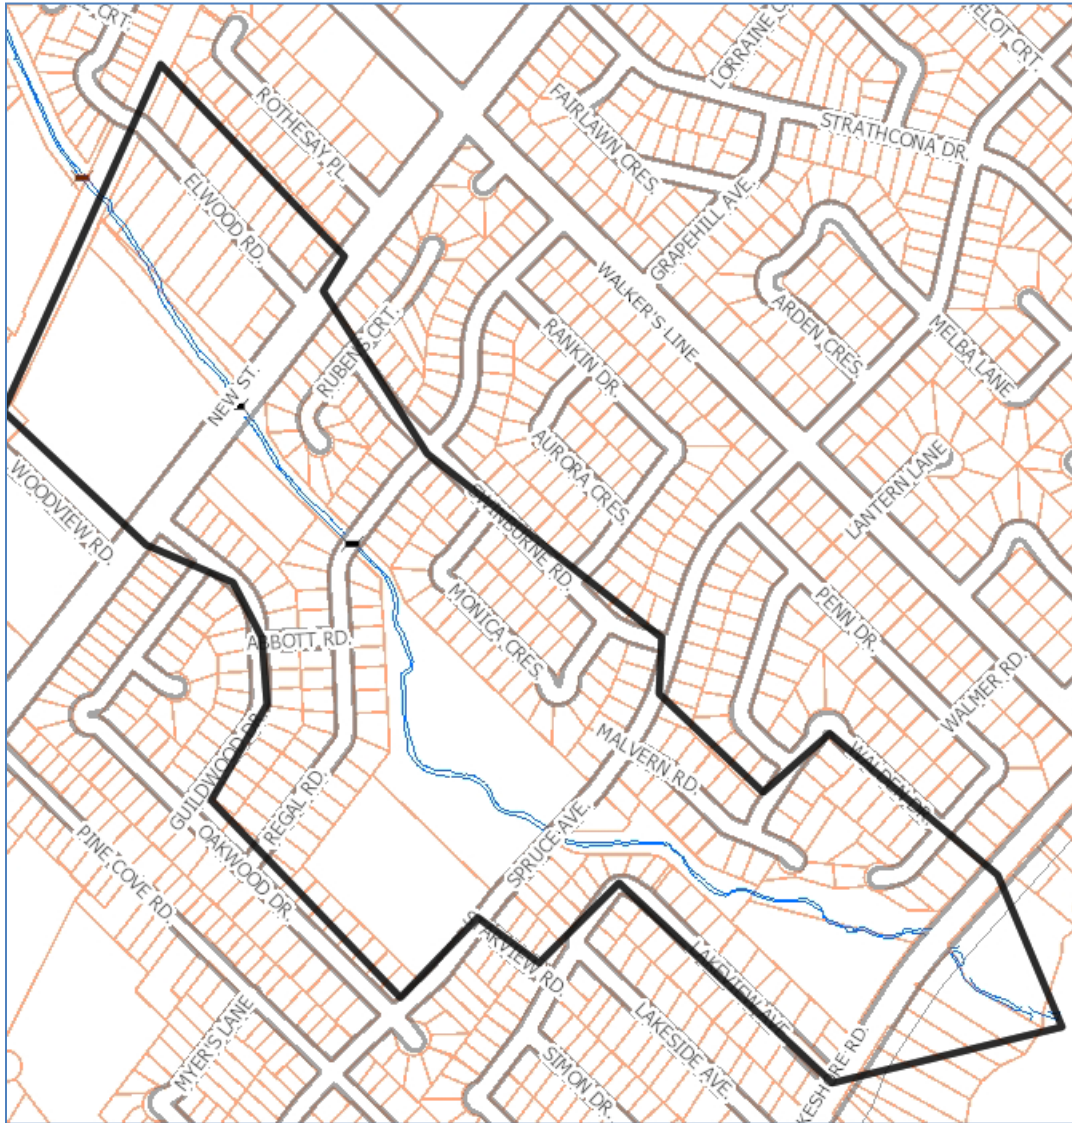

Please forward any questions or comments to:
