GLENWOOD SCHOOL DRIVE STORMWATER MASTER PLAN

The Glenwood School Drive area is located south of the QEW just west of the Guelph Line exit and is bounded by Queensway Dr. to the north, CN Rail to the south, Guelph Line to the east and Brenda Crescent and Phyllis Street to the west.

The City of Burlington has completed the Master Plan in accordance with the provisions for Master Plans of the Municipal Class Environmental Assessment, October 2000, as amended in 2011. The purpose of the Master Plan was to provide conceptual plans to mitigate the potential effects of increases in surface runoff and changes in storm water quality caused by future intensification of the Study Area. Various alternatives for stormwater management were analyzed and evaluated based on feasible engineering technologies, public safety, and natural, social, economic and cultural environments. The preferred solution is to require that every re-development within the study area includes on-site stormwater management controls, for local flow reduction and for storm water quality management.

One Public Information Centre was held to provide information on the Master Plan to the public, and to obtain feedback on the proposals. In addition, interested public agencies were contacted and given an opportunity to provide input to the study.

The Master Plan Report will be available for public review and input for a period of 30 days, starting on March 2, 2015. The report can be reviewed at the City’s website and at the City of Burlington Clerk’s Department.

Anyone with an interest in the Study can review the Master Plan report and provide comments to the City of Burlington during the 30-day review period. If you have any comments or questions or require any further information about the study or the Municipal Class Environmental Assessment process, please direct them to
