**Re: Amending Letter - Noise Feasibility Study, Nautique Condo,
Burlington, Ontario**

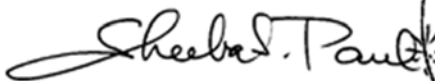

Dear Lorraine,

As requested, HGC Engineering has reviewed the latest site plan for the development prepared by ICON Architects Inc. dated June 22, 2016. Our latest noise feasibility study entitled "Noise Feasibility Study, 374 Martha Street, Burlington, Ontario" dated November 4, 2014. Since the completion of the November 2014 noise study, the property at 380 Martha Street has been purchased and has been incorporated into the site plan. The height of the proposed building condominium building is to be 26-storeys with six levels of underground parking and ground floor retail. The proposed site plan is attached for reference.

The results from our review of the latest site plan indicates that the recommendations contained in our November 4, 2014 noise study generally remain applicable. Refer to our November 4, 2014 noise study for detailed explanations of the noise control requirements.

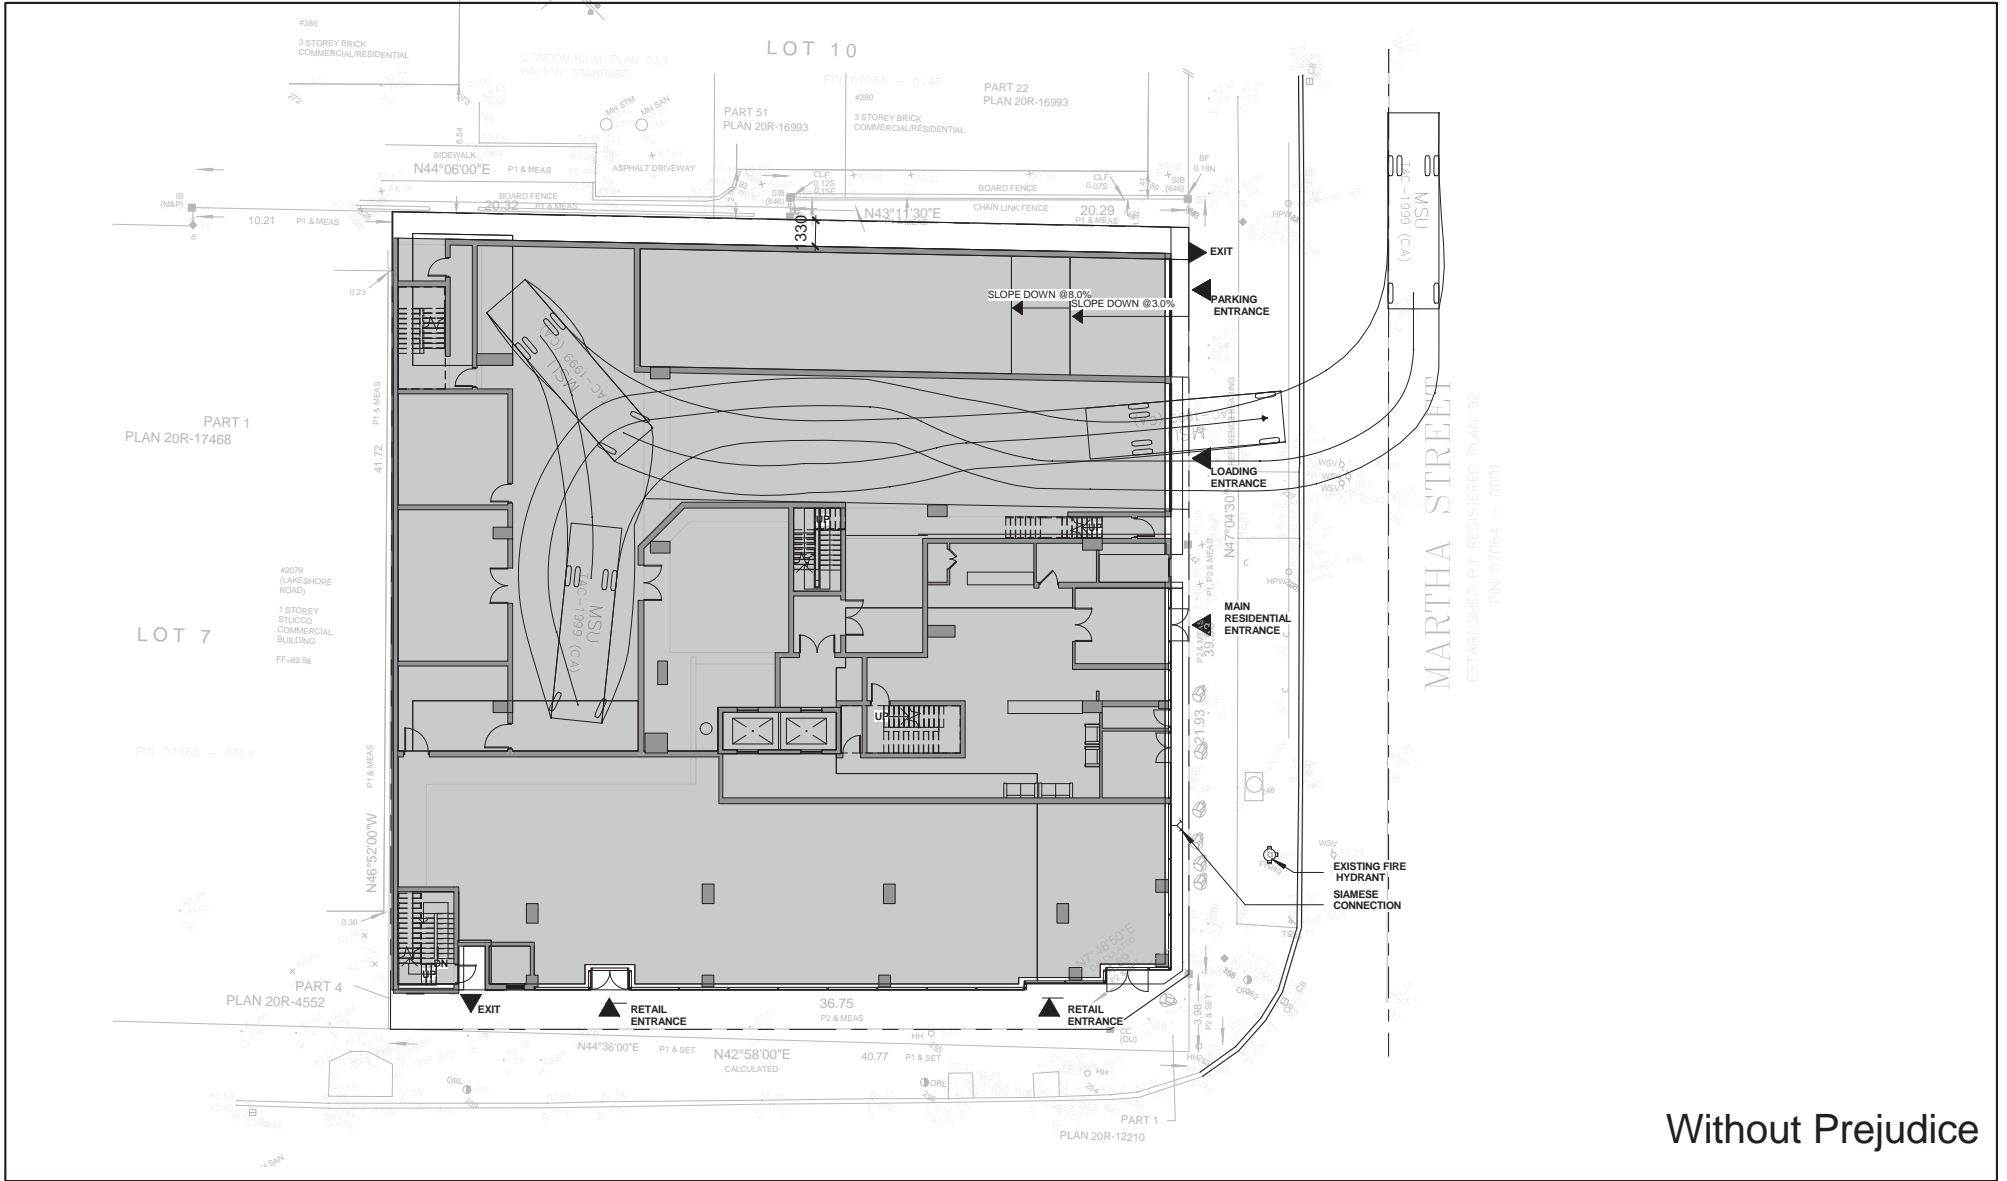

We trust this information is sufficient for your present purposes. Please call if you have any questions or concerns.

Yours truly,
Howe Gastmeier Chapnik Limited

Ms. Sheeba Paul, MEng, PEng

Without Prejudice
