Attention: Marina Fensham

**SUPPLEMENTAL GEOTECHNICAL COMMENTS
PROPOSED MULTI-STOREY APARTMENT BUILDING
4063 UPPER MIDDLE ROAD
BURLINGTON, ONTARIO**

Dear Ms. Fensham,

Further to our recent slope stability assessment dated September 27, 2017, and our previous geotechnical investigation report, SM 135055-G, dated May 16, 2013, SOIL-MAT ENGINEERS has prepared this supplemental geotechnical considerations letter in connection with the above noted project.

At the time of our geotechnical investigation, the proposed development included the construction of an eight to ten storey residential building with one underground level. We understand that the proposed design has been revised to a seven storey structure with one underground level. As this does not represent a material change from a geotechnical point of view, the comments and recommendations provided in our geotechnical investigation and slope stability assessment reports would still be considered valid and should be adhered to.

We trust that this letter is sufficient for your current needs. Should you require any additional information, please do not hesitate to contact the undersigned.

Yours very truly,
SOIL-MAT ENGINEERS & CONSULTANTS LTD.

Kyle Richardson, P. Eng.
Project Engineer
