Hi Alireza
We will provide groundwater monitoring information as soon as it is available.
Please note that Record of Site Condition (RSC) will be prepared and submitted based on Phase One and phase Two ESA reports. Based on the findings of Phase Two ESA, if soil and groundwater quality at the site meets the applicable Ministry of the Environment, Conservation and Parks (MECP) site condition standards, the RSC process will be initiated. If Phase Two ESA identifies soil and/or groundwater impacts, additional investigation will be required to determine the extent of impacts followed by remediation/cleanup of impacted soil and/or groundwater with confirmatory sampling to meet the applicable MECP site condition standards. The Phase Two ESA will be updated incorporating results of additional investigation. The RSC will be prepared based on updated Phase Two ESA report. The submitted RSC is reviewed by the Ministry within one month time before it is either acknowledged (filed) or returned with comments requesting additional information and resubmission. The RSC process is bit lengthy. It is not required to be included in your submission.
I hope this addresses your question. Please let me know if additional information is required.

Kind Regards
Muhammad
