Waste Management Plan — 2087-2103 Prospect Street

The subject lands are currently occupied by 65 apartment units in one 8-storey building at the south end of the site. There are 44 proposed stacked townhouse units within two townhouse blocks located on the rear portion of the site.

All waste for the site will be picked up at the proposed enclosed garbage building located within the rear parking area, which will be constructed through the development process. This building is identified and labelled on the Site Plan included with this submission and is located midpoint between the existing apartment building and the proposed townhouse blocks.

Tenants in the existing apartment building will have a similar waste/garbage collection system to that which they currently have:

- There are currently 2 4-yard and 7 recycling bins located on the site for garbage and recycling;
- Currently, tenants of all units on 2087-2103 Prospect Street (both the existing apartment units and fourplex units) individually bring their respective garbage and recycling to these bins/boxes for weekly collection.

Tenants in the proposed townhouse units will also bring their garbage and/or recycling to the proposed garbage collection area like the tenants of the existing apartment units.
