SWM Facility Sizing (Proposed)

SEDIMENT FOREBAY SIZING - WEST POND

Based on MOEE SWM Planning & Design Manual (2003)

Length Based on Settling Velocity

$$L = \sqrt{\frac{r\,Q_p}{v_s}}$$

L = 26.75 m

r : 1 = length to width ratio — r = 2.9
Q_p = peak SWM outflow during quality storm — Q_p = 0.074
v_s = settling velocity for 0.15 mm particles (m/s) — v_s = 0.0003

Dispersion Length

$$L_D = \frac{8Q}{d\,v_f}$$

L_D = 52.48 m

Q = Inlet pipe to SWM facility - 2400x12200mm Box at 0.4% (m^3/s) — Q = 6.56
d = depth of perm pool in forebay (m) — d = 2.0
v_f = desired velocity in forebay (m/s) — v_f = 0.5

Check Scour Velocity

v = Q/A
v = **0.12 m/s**

b = bottom width (avg) of forebay (m) — b = 21
Q = inlet flow (m^3/s) — Q = 6.56
A = cross-sectional area (m^2) — A = 57.0
Target velocity = 0.15 m/s — V_{targ} = 0.15

Therefore, **Velocity Target Satisfied**

Required Forebay Length = 52.48 m

Forebay Length Provided = 60 m

SWM Facility Sizing

DETENTION TIME CALCULATION FOR EXTENDED DETENTION VOLUME

SWMF1 (West Pond)

Pond drawdown time can be estimated using Equation 4.10
(MOEE SWMP Planning & Design Manual)

$$t = \frac{2A_p}{CA_o(2g)^{0.5}}(h_1^{0.5} - h_2^{0.5})$$

t = drawdown time in seconds	=	to be calculated	
Ap = surface area of the pond (m^2)	=	**18679**	(Avg. Surface Area between h_1 & h_2)
C = discharge coefficient	=	0.63	
D = diameter of controlling orifice (m)	=	**0.320**	
Ao = cross-sectional area of orifice (m^2)	=	0.08042	
g = acceleration due to gravity (m/s^2)	=	9.81	
Orifice invert elevation (m)	=	***131.200***	(Permanent Pool Elev.)
Orifice centreline elevation (m)	=	***131.360***	
Extended detention elevation (m)	=	***132.380***	
h_1 = starting water level above orifice (m)	=	1.0200	
h_2 = ending water level above orifice (m)	=	0.00	

t = 168114 seconds = 46.7 hours

Note: The 320mm dia. Orifice is not part of current SWM design and will be included during detailed design stage.

SWM Facility Sizing (Proposed)

SEDIMENT FOREBAY SIZING - SWMF2

Based on MOEE SWM Planning & Design Manual (2003)

Length Based on Settling Velocity

$$L = \sqrt{\frac{r\,Q_p}{v_s}}$$

L = 24.54 m

r : 1 = length to width ratio — r = 2.1
Q_p = peak SWM outflow during quality storm — Q_p = 0.086
v_s = settling velocity for 0.15 mm particles (m/s) — v_s = 0.0003

Dispersion Length

$$L_D = \frac{8\,Q}{d\,v_f}$$

L_D = 24.32 m

Q = Inlet pipe to SWM facility - 1050mm pipe at 0.7% (m^3/s) — Q = 2.28
d = depth of perm pool in forebay (m) — d = 1.5
v_f = desired velocity in forebay (m/s) — v_f = 0.5

Check Scour Velocity

v = Q/A
v = **0.09 m/s**

b = bottom width (avg) of forebay (m) — b = 11.1
Q = inlet flow (m^3/s) — Q = 2.28
A = cross-sectional area (m^2) — A = 25.1
Target velocity = 0.15 m/s — V_{targ} = 0.15

Therefore, **Velocity Target Satisfied**

Required Forebay Length = 24.54 m

Forebay Length Provided = 25 m

BRONTE CREEK MEADOWS SSWS

STAGE-STORAGE DISCHARGE - SWMF2 - Mainway @ Sheldon Creek (West Branch)

Burlington, Ontario

SWM Facility Sizing

DETENTION TIME CALCULATION FOR EXTENDED DETENTION VOLUME
SWMF2

Pond drawdown time can be estimated using Equation 4.10
(MOEE SWMP Planning & Design Manual)

$$t = \frac{2A_p}{CA_o(2g)^{0.5}}(h_1^{0.5} - h_2^{0.5})$$

t = drawdown time in seconds	=	to be calculated	
Ap = surface area of the pond (m^2)	=	**3980**	(Avg. Surface Area between h_1 & h_2)
C = discharge coefficient	=	0.63	
D = diameter of controlling orifice (m)	=	**0.130**	
Ao = cross-sectional area of orifice (m^2)	=	0.01327	
g = acceleration due to gravity (m/s^2)	=	9.81	
Orifice invert elevation (m)	=	***126.500***	(Permanent Pool Elev.)
Orifice centreline elevation (m)	=	***126.565***	
Extended detention elevation (m)	=	***127.170***	
h_1 = starting water level above orifice (m)	=	0.6050	
h_2 = ending water level above orifice (m)	=	0.00	

t = 167157 seconds = 46.4 hours

Note: The 130mm dia. Orifice is not part of current SWM design and will be included during detailed design stage.
